**Wyle Laboratories Norco Facility Site**  
**August 2, 2004**

**SITE INVESTIGATION/CLEANUP DOCUMENTS**

- DTSC issued comments on the Wyle Site Boundary report. DTSC requested modifications to the report pertaining to Quality Assurance/Quality Control and incorporation of the northwestern boundary offsite sampling results.
- DTSC is evaluating a proposed schedule submitted by Wyle to conduct an interim measure near Wyle's northwestern boundary, and an updated schedule of the site-wide investigation/cleanup process.
- DTSC's Wyle project team is evaluating the need and timing of additional offsite sampling near Wyle's western and northwestern boundaries. Offsite groundwater sampling is necessary to evaluate potential migration of contaminants through bed rock fractures and to define the boundaries of groundwater contamination. Additional offsite soil gas sampling, in-door air sampling and/or air sampling may be necessary as part of monitoring activities for the northwestern boundary interim measure.
- DTSC received U.S EPA's Preliminary Assessment/Site Inspection Report for Wyle dated July 20, 2004. DTSC will review the report and consider the information/data included as part of its assessment of the Wyle Site.

**INVESTIGATION/CLEANUP FIELD WORK**

- Groundwater cleanup system operation is ongoing.

**PUBLIC PARTICIPATION:**

- DTSC is arranging for a public meeting on August 16, 2004. DTSC will present the findings of the off site sampling along Golden West Lane, and discuss the action it is taking to evaluate additional offsite concerns raised by the public. U.S EPA representatives will also attend the meeting to present their findings and respond to questions on the Preliminary Assessment/Site Inspection Report.
